Get to Know a Pandas Array

You will use the dataframe df for the following:

```
[1]: import pandas as pd

df=pd.DataFrame({'a':[11,21,31], 'b':[21,22,23]})
```

1. Display the first three rows:

```
[3]: df.head(3)
```

```
[3]:    a  b
0  11  21
1  21  22
2  31  23
```

[Click here for the solution](#)

```
df.head(3)
```

2. Obtain column 'a' :

```
[5]: df['a']
```

```
[5]: 0    11
     1    21
     2    31
     Name: a, dtype: int64
```

[Click here for the solution](#)

```
df['a']
```
